

## RELAZIONE PERIODICA

Mesi di novembre-dicembre 2024

|                       |                                                                                                  |
|-----------------------|--------------------------------------------------------------------------------------------------|
| Dottorando            | Ken Tanaka Hernandez                                                                             |
| CUP progetto          | I53C21000370006                                                                                  |
| Corso di dottorato    | Applied Data Science and Artificial<br>Intelligence (ADSAI)<br>Università degli Studi di Trieste |
| Ciclo-anno accademico | XXXIX                                                                                            |
| Tutor scientifico     | Monica Sugan                                                                                     |

### ATTIVITÀ DI RICERCA E FORMATIVE TUTORAGGIO E DIDATTICA CONFERENZE RISULTATI DELLA RICERCA ALTRO

Research consolidated the machine-learning ([ML](#)) pipeline for seismic phase detection and [association](#) using [seismic](#) data from north-eastern Italy [and surrounding regions](#). SeisBench [using](#) PhaseNet, EQTransformer, [PyOcto](#) and GaMMA remained the methodological basis for detecting [seismic](#) phases and assembling earthquake information. Work also focused on repeatable, large-scale processing through ADA Cloud and Leonardo/Galileo100 infrastructure. The period established a coherent, scalable direction for evaluating ML [pipeline](#) in earthquake monitoring.
