

RELAZIONE PERIODICA

Mesi di maggio-giugno 2025

Dottorando	Ken Tanaka Hernandez
CUP progetto	I53C21000370006
Corso di dottorato	Applied Data Science and Artificial Intelligence (ADSAI) Università degli Studi di Trieste
Ciclo-anno accademico	XXXIX
Tutor scientifico	Monica Sugan

ATTIVITÀ DI RICERCA E FORMATIVE TUTORAGGIO E DIDATTICA CONFERENZE RISULTATI DELLA RICERCA ALTRO

Research advanced a scalable ML pipeline for earthquake detection and classification on NE-Italy and surrounding area seismic data. The workflow was refined for larger datasets, with attention to processing time, memory use, model evaluation, robustness, and deployment across ADA Cloud, Leonardo, and Galileo100. Experience from the Epicure-CINECA Hackathon informed implementation practices and pipeline improvements. By the end of the period, the project had a more reproducible seismic-monitoring workflow combining detection, classification, quantitative evaluation, and computational deployment.

From April 2025 to July 2025 research stay at the Institut des Sciences de la Terre (ISTerre), Grenoble, supervised by Dr. Jannes Münchmeyer.
